

TOLERO™

IRRIGATION WATER OPTIMIZER

TOLERO™ is an innovative, highly concentrated formulation of two irrigation surfactants that moves water, nutrients and soil-applied products into and throughout the root zone and holds plant-available water over time.

FEATURES AND BENEFITS:

- Reduces water stress to improve plant health
- Increases crop yield and quantity
- Enhances uptake and performance of nutrients and soil-applied inputs
- Improves irrigation efficiency by reducing irrigation time
- Low use rates for excellent return on investment
- Reduces runoff and leaching to conserve water

USE RATES:

- Apply TOLERO at the rate of 1 quart per acre (2.34 liters per hectare)
- Make subsequent applications at the rate of 1 pint per acre (1.17 liters per hectare)
- Rates may be adjusted to meet the needs of the crop, based on soil type and conditions

PACKAGING:

- 2 X 2.5 gallons per case
- 275 gallon tote

APPLICATION INTERVAL:

IRRIGATION INJECTION: Apply through an irrigation system utilizing drip tubes, tape, micro emitters or overhead sprinklers. Do not apply TOLERO through earthen ditches. Prior to mixing TOLERO with water conditioners or plant nutrients, perform a jar test to test compatibility. Agitation is recommended in fertigation tanks to ensure uniform injection of nutrients and TOLERO. Always use back-flow prevention when injecting TOLERO or other injectable products.

SPRAY APPLICATION: On annual crops, apply TOLERO alone or in combination with nutrients, prior to planting. On perennial crops, direct the spray to the soil surface at the base of the plant. Irrigate immediately after all spray applications to move product into the soil.
